

# Greek & Tuscan Columns

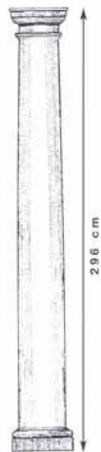

## Greek Doric

Full or Half Round

## Tuscan

Full Round,  
Half Round  
or Pilasters

## Tuscan

Full Round  
or  
Half Round

## Standard Size Columns made in GRP (Glassfibre)

Columns can be made shorter than the overall height.

We can make them taller than the maximum overall height, this is a more complex operation requiring a special quotation.

The columns on this and the previous four pages are hollow and normally supplied with timber, top and bottom, for assisting in fixing to other structures. However, as these columns are handmade, they can be modified for different construction requirements, ie we have made columns in two halves with an internal overlapping flange to enable it to fit round steel joists in situ. Also we have fitted plywood in the top and bottom with a hole in the plywood to accept scaffold pole. If you have specific requirements please ring for a quotation.
